

Advanced Tool & Supply High Pressure Debris Unit(HPDU)

- ❖ Helps protect against debris which can cause damage in equipment and downhole tools.
- ❖ Designed with efficacy in mind, ATS's HPDU can be interfaced quickly and safely directly to a rig's current standpipe.
- ❖ Ability to filter through 2 primary screens at a time leaving secondary screens available for quick lineup change.

Advanced Tool & Supply (ATS) HPDUs have been designed with directional flow from the inside out. This allows for the unique design of ATS's filtering screens to maximize capturing of debris. The HPDU is suitable for offshore and land operations, completions and work-over operations.
